

The ENRR Field Campaign: Improving Our Response to El Niño

GEOS-5 is Used to Assess the Impact of Special Observations

The map shows the aggregated impact of all dropsonde observations deployed by the NOAA G-IV aircraft during the **El Niño Rapid Response (ENRR)** field campaign, as computed by the GEOS-5 Observation Impact Tool. Blue (red) shades denote locations where the dropsonde observations reduced (increased) 24-h global forecast errors, measured in terms of total moist energy.
